Letter of Recommendation for Craig Mautner

Craig Mautner has worked for me for the past nine years, first at Doctor Design and then at Wind River. In that time he has served as an Engineer, a Technical Lead and a Project Manager. Craig applied his hardware, software & management skills on many diverse projects. He has done everything from personally designing FPGAs to managing Set Top Box software development teams. All of Craig's projects have been completed successfully, leaving us with satisfied customers.

Craig's hardware and software design skills are top-notch as are his debugging capabilities. Craig is a very productive programmer, generating well-tested, fully documented and commented code in an extremely short time. His attention to detail up front has saved much time in the development and debugging process later.

As a Project Manager Craig was highly respected by his peers and the engineers on his projects. This led to efficient teams that worked well together. His teams would all work for Craig again.

Craig works well with customers and has made many customer presentations and visits. His technical knowledge and relaxed style combine to make a favorable impression on others.

If you are considering having Craig work for you on a project, my advice is to do it quickly before somebody beats you to it.

A handwritten signature in blue ink that reads "Marco Thompson".

Marco Thompson
President, San Diego Telecom Council
Chief Technical Officer, Wind River Services
Founder and President, Doctor Design Inc.
